Healthcare Operations and Performance

Executive briefing for HealthConnect Rwanda leadership

Okoro Joseph Ifeanyichukwu | Data Analytics Intern, AnalystLab Africa | Week 6

Three findings that point to money and care we can recover

Executive summary

12 to 16

appointments per doctor: same staff, uneven load

RWF 920 M

bills still unpaid (9.9%)

2.99 / 5

average rating; 4 in 10 are poor

Staffing does not follow demand. Every hospital has 35 nurses and 17 to 18 doctors, whatever its patient load.

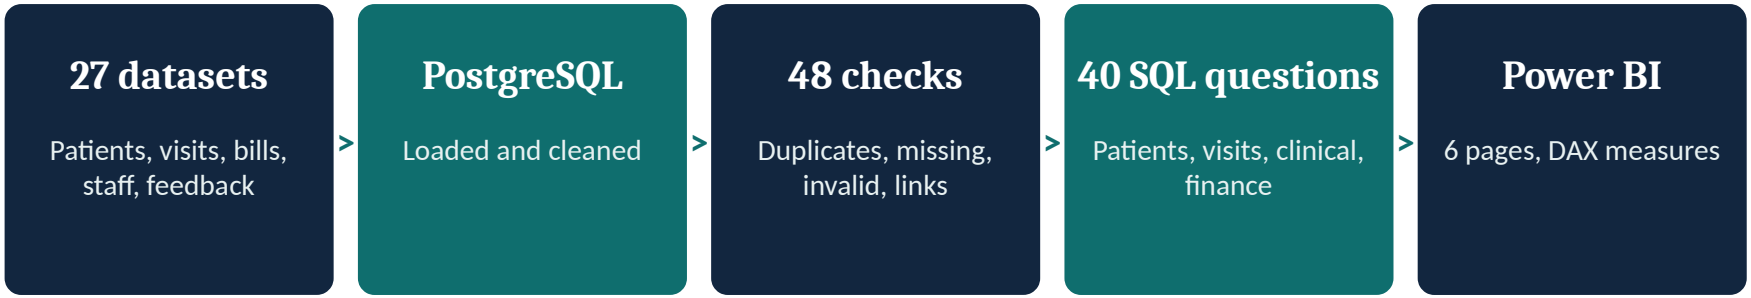

The busiest hospitals are among the least liked. HF013 and HF014 rate 2.77 out of 5.

Cash is tied up. Half of insurance claims (RWF 2.44 billion) are still pending.

Ask: re-balance doctors, chase unpaid bills and claims, and fix patient experience in the busiest hospitals.

How the analysis was done

From 27 raw files to a six-page dashboard

Only 5,000 appointments have full details. Bills, diagnoses and ratings point to up to 60,000 appointments, but 92% are missing from the appointment list.

Totals use every record. Hospital, department and province results use the traceable 5,000.

Hospitals appear only as codes (HF001 to HF020); provinces mean where the patient lives.

The network at a glance

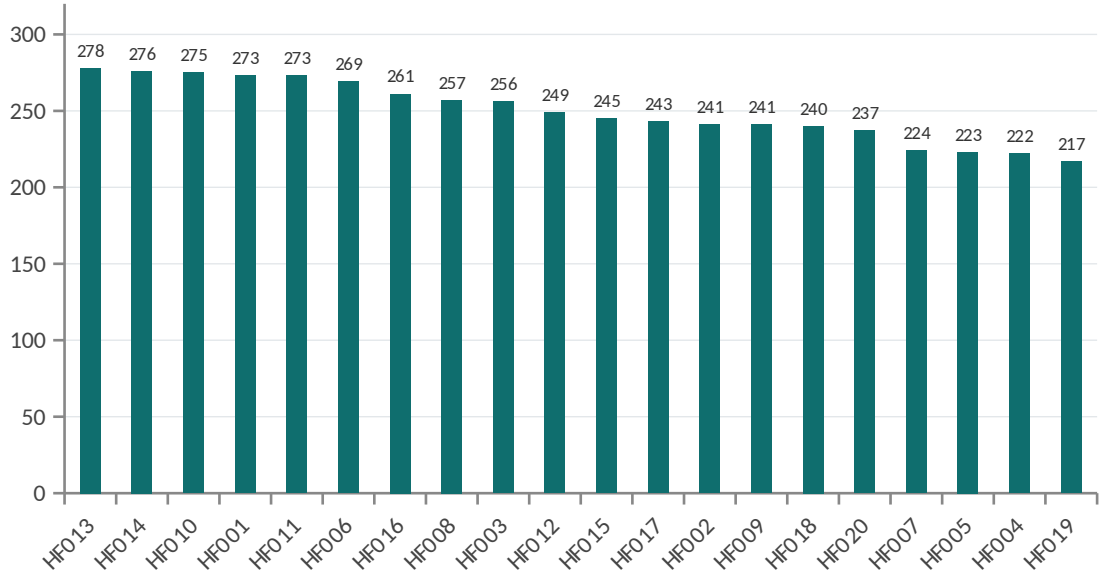

2026, all amounts in Rwandan francs

20,000 registered patients	**5,000** detailed appointments	**RWF 9.31 B** total billed
90.1% of billing collected	**11.7%** admission rate (5.5-day stay)	**1 : 16** staff to patients (1,250 staff)

27% of patients are over 65 and 74.6% have a chronic condition: demand for long-term care is high.

Patient volume is fairly even across hospitals

HF013, HF014 and HF010 are busiest; HF019 is quietest

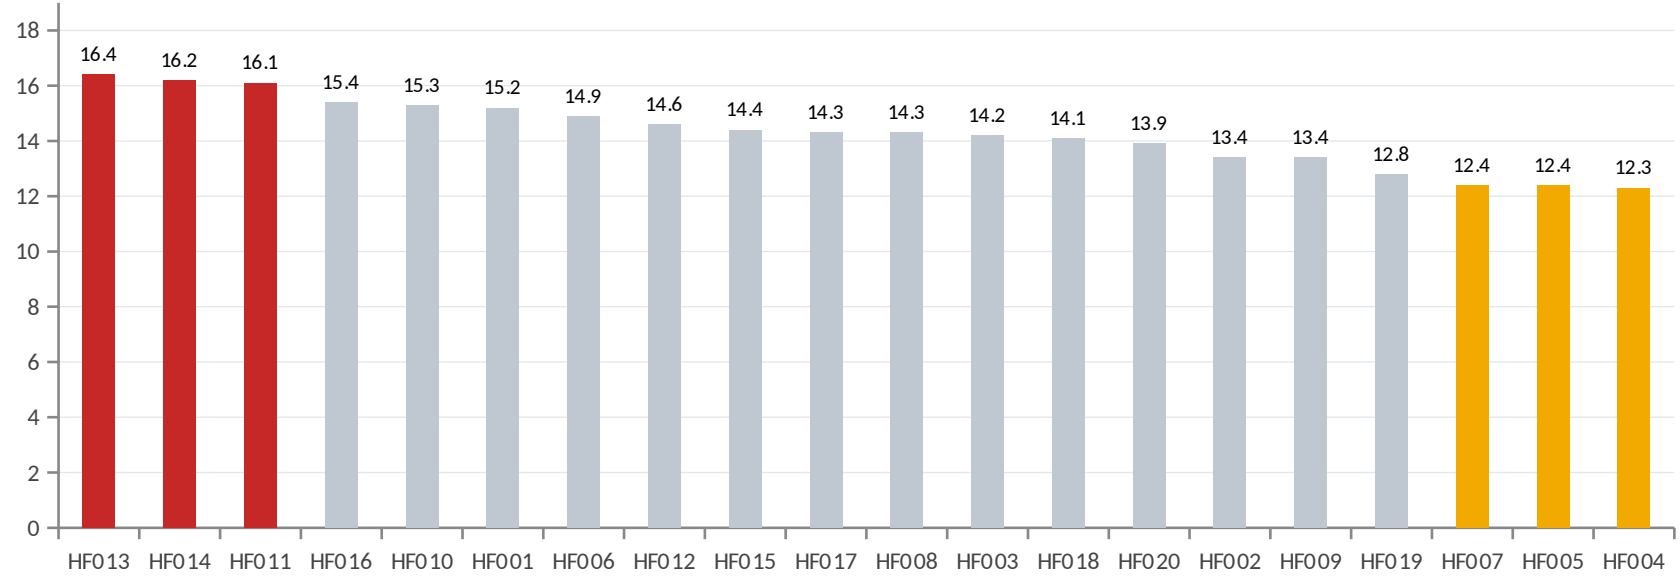

Busiest departments

Department	Visits
Cardiology	544
Radiology	525
Obstetrics & Gyn.	511
Laboratory	499
Emergency	495
ICU (lowest)	467

The busiest hospital sees only 28% more patients than the quietest, so volume alone does not show overload.

Same staff, uneven workload

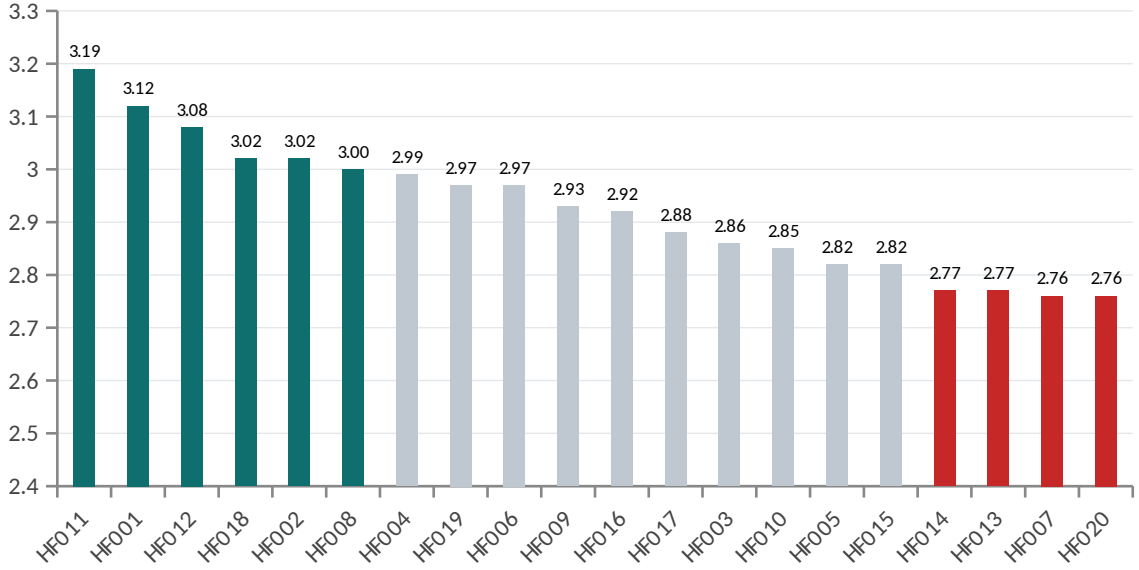

Appointments per doctor, by hospital

Every hospital has 35 nurses and 17 to 18 doctors. Move or add doctors where the load is 16 or more.

Busy hospitals are among the least liked

Average patient rating, out of 5 (average 2.99)

40.5%

of ratings are 1 or 2 stars

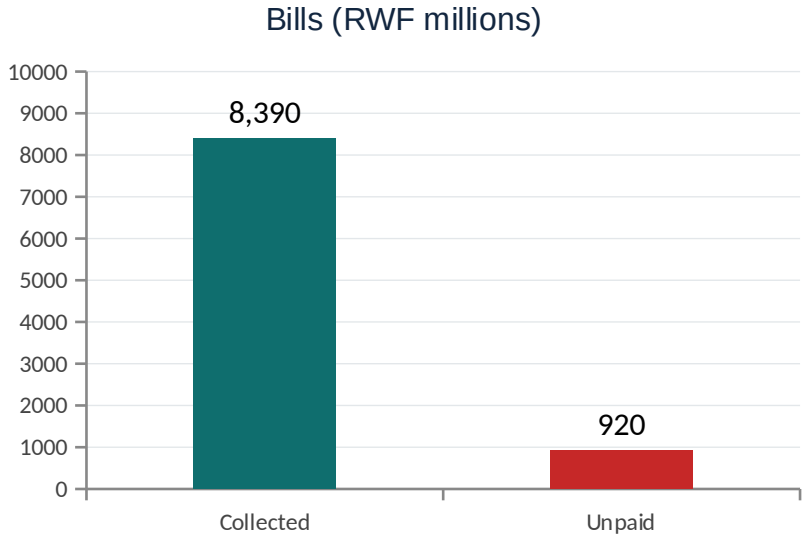

ICU 2.76

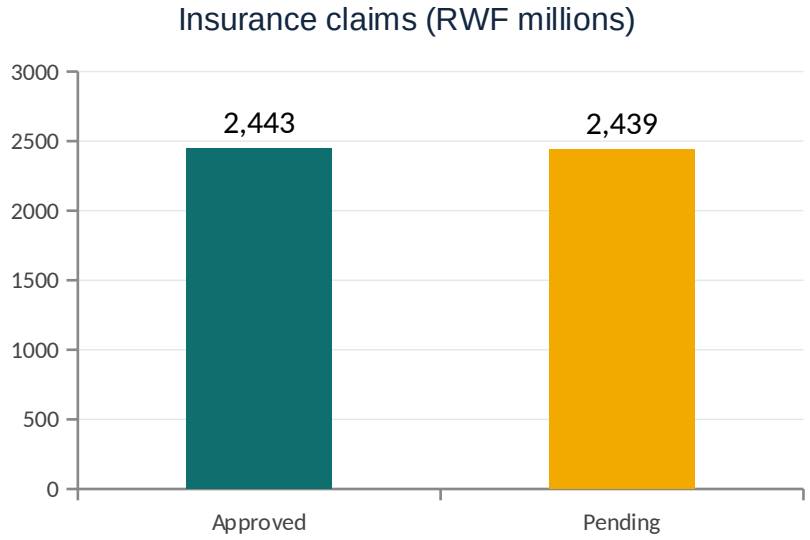

lowest department; Emergency best (3.02)

HF013 and HF014 are the 1st and 2nd busiest and both rate 2.77. HF011 is busy and best rated: learn from it.

RWF 920 M unpaid, RWF 2.44 B in claims pending

Money tied up

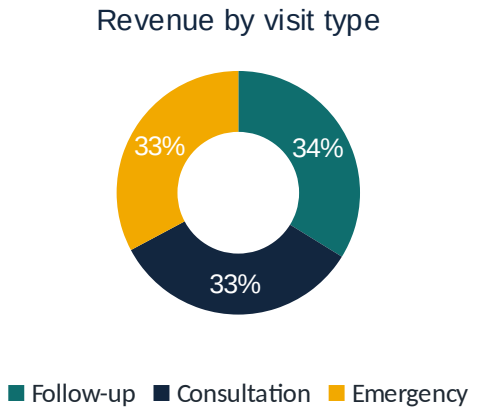

11,887 bills not fully paid. 36,052 bill status labels contradict the payments: fix records so finance sees what is owed.

Insurers are alike; revenue is spread evenly

Insurance claims and where traceable revenue comes from

Insurer	Claims	Claimed (RWF)	Approved	Value approved
Radiant	10,644	1.237 B	50.1%	619.8 M
Private	10,508	1.217 B	49.3%	595.2 M
RSSB	10,511	1.215 B	50.9%	623.8 M
MMI	10,373	1.213 B	49.6%	604.4 M

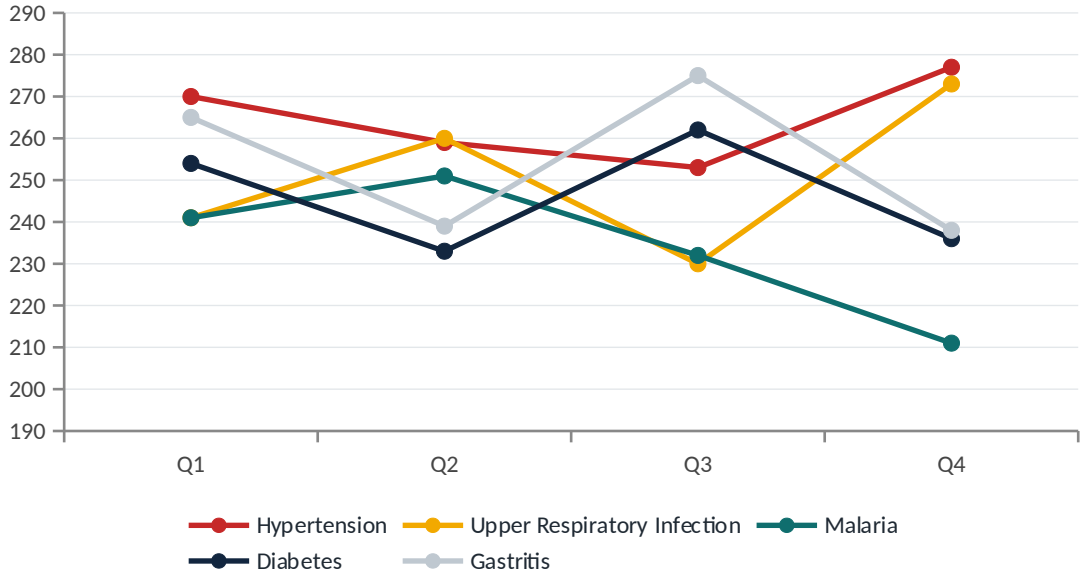

Top earning departments (traceable bills): Cardiology RWF 86.2 M, Radiology 82.0 M, Laboratory 78.6 M. Average bill RWF 155,157.

No claim has been rejected; half are simply pending. Agree a 30-day approval target with each insurer.

Five equally common diagnoses; two to watch

Diagnoses by quarter (traceable appointments): hypertension and respiratory infections rose in Q4

33.3%

of 60,000 diagnoses are severe

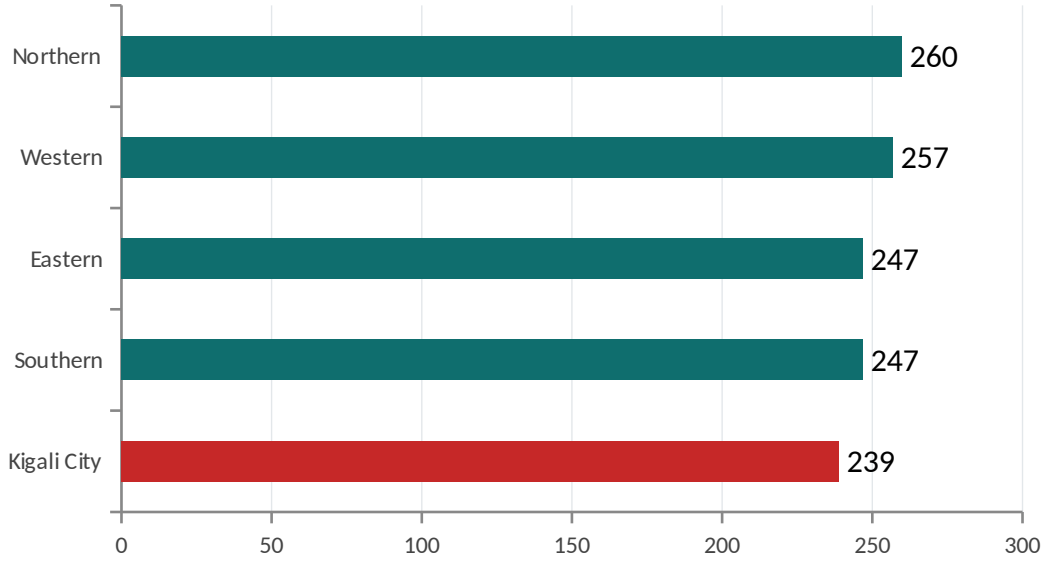

5.5 days

average hospital stay (5,000 admissions)

Q4 includes appointments dated after the analysis. Changes are small: treat as a watch-list.

Kigali City patients use hospitals least

Appointments per 1,000 registered patients, by home province

RWF 162 M

Western: most traceable revenue

RWF 146 M

Kigali City: least traceable revenue

Patients are spread evenly (3,923 to 4,091 per province); use is not. Investigate access in Kigali City, Southern and Eastern.

Where to expand: more doctors, not more beds

Hospitals that need capacity

Hospital	Appointments	Per doctor	Rating	Verdict
HF013	278	16.4	2.77	Add doctors first
HF014	276	16.2	2.77	Add doctors first
HF010	275	15.3	2.85	Next in line
HF011	273	16.1	3.19	Coping well: share practice

Beds are not the limit. About 27,400 bed-days were used out of 730,000 available (estimated 3.8%), and all 2,000 beds are listed as available.

Pressure is on consultation time. That points to doctors and clinic rooms, not wards.

Start with HF013 and HF014: top-two volume, 16+ appointments per doctor, among the lowest ratings.

Six recommendations

What to do, and where to start

Action	Why	Start with
1. Re-balance doctors	12 to 16 appointments per doctor	HF013, HF014, HF011
2. Payment follow-up drive	RWF 920 M unpaid	Largest of the 11,887 unpaid bills
3. Clear claim backlog	RWF 2.44 B pending	RSSB and Radiant; 30-day target
4. Patient-experience programme	40.5% poor ratings	HF013, HF014, HF007, HF020, ICU
5. Fix the data	Names, links, bill status, no-shows missing	Assign an owner and deadline
6. Study access in Kigali City, Southern, Eastern	Lowest use per patient	Outreach plus patient survey

What the data could not tell us, and next steps

Limitations

- No hospital names, types or locations (codes only)
- Only 5,000 of 60,000 appointments are detailed
- 916 appointments dated after the analysis date
- No cancellation field; beds all "Available"
- Revenue Summary (RWF 1.13 B) does not match bills (RWF 9.31 B)
- Phone numbers damaged; not used

Next steps

- Share findings with the Chief Medical Officer and Finance Director
- Load the full 60,000-appointment list and hospital master data
- Refresh the six-page dashboard monthly
- Track: doctors per appointment, unpaid bills, pending claims, rating

Thank you. Questions?
